

Needed to set up an MQM Scorecard project

MQM Typology (XML file)

- MQM's framework for defining translation quality metrics

Metric file (XML file)

- Subset of the Typology file based on the needs of the specific project

Bitext file (TXT file; can start from ordered TMX or XLIFF and converted)

- UTF-8 text file where each line is a single segment in the source text followed by a tab and then the corresponding target segment

Optional: Structured Specifications File (STS file)

- File containing the specifications relevant to the project (specifications are not optional but it is optional to load them into the Scorecard)
